Not all fax machines support polling.

Polled Transmit (Black & White only)

Polled transmit lets you set up your machine to wait with a document so another fax machine can call and retrieve it.

You can change your selection at any time. If received faxes are still in the machine's memory when you change the Memory Receive operation, a message will appear on the LCD. (See *Changing Memory Receive operations* >> page 19.)

Receiving faxes into memory when paper tray is empty

As soon as the paper tray becomes empty during fax reception, the LCD shows `No Paper Fed.` Put some paper in the paper tray. (>>Basic User's Guide: *Loading paper and other print media*)

If you don't put paper in the paper tray, the machine will carry on receiving the fax, with the remaining pages being stored in memory, if enough memory is available.

Further incoming faxes will also be stored in memory until the memory is full. When the memory is full the machine will stop automatically answering calls. To print the faxes, put fresh paper in the tray.

Fax Forwarding

When you choose Fax Forward, your machine stores the received fax in the memory. The machine will then dial the fax number you have programmed and forward the fax message.

- 1 Press `Menu`.
- 2 Press `▲` or `▼` to display `Fax`.
- 3 Press `Fax`.

Caller ID

The Caller ID feature lets you use the Caller ID subscriber service offered by many local telephone companies. Call your telephone company for details. This service shows the telephone number, or name if it is available, of your caller as the line rings.

After a few rings, the LCD shows the telephone number of your caller (and name, if available). Once you answer a call, the Caller ID information disappears from the LCD, but the call information stays stored in the Caller ID memory.

You can view the list or choose one of these numbers to fax to, add to Speed Dial, or delete from the history. (See *Caller ID history* >> page 29.)

- You can see the number (or name).
- The **# Unavailable** message means the call originated outside your Caller ID service area.
- The **Private Call** message means the caller has intentionally blocked transmission of Caller ID information.

You can print a list of the Caller ID information received by your machine. (See *How to print a report* >> page 35.)

Note

- This feature may not be available in certain areas of the USA and Canada.
- The Caller ID service varies with different carriers. Call your local telephone company to find out about the kind of service available in your area.

Setting up your area code (USA only)

When returning calls from the Caller ID history your machine will automatically dial “1” plus the area code for all calls. If your local dialing plan requires that the “1” not be used for calls within your area code, enter your area code in this setting. With the area code setting, calls returned from the Caller ID history to numbers *within* your area code will be dialed using 10 digits (area code + 7-digit number). If your dialing plan does not follow the standard 1 + area code + 7-digit number dialing system for calling *outside* your area code, you may experience problems returning calls automatically from the Caller ID history. If this is not the procedure followed by your dialing plan, you will not be able to return calls automatically.

- 1 Press **Menu**.
- 2 Press **▲** or **▼** to display **Fax**.
- 3 Press **Fax**.
- 4 Press **▲** or **▼** to display **Miscellaneous**.

Special line considerations

Roll-over telephone lines

A roll-over telephone system is a group of two or more separate telephone lines that pass incoming calls to each other if they are busy. The calls are usually passed down or “rolled over” to the next available telephone line in a preset order.

Your machine can work in a roll-over system as long as it is the last number in the sequence so the call cannot roll away. Do not put the machine on any of the other numbers; when the other lines are busy and a second fax call is received, the fax call will be sent to a line that does not have a fax machine. **Your machine will work best on a dedicated line.**

Two-line telephone system

A two-line telephone system is nothing more than two separate telephone numbers on the same wall outlet. The two telephone numbers can be on separate jacks (RJ11) or mixed into one jack (RJ14). Your machine must be plugged into an RJ11 jack. RJ11 and RJ14 jacks may be equal in size and appearance and both may contain four wires (black, red, green, yellow). To test the type of jack, plug in a two-line telephone and see if it can access both lines. If it can, you must separate the line for your machine.

Converting telephone wall outlets

There are three ways to convert to an RJ11 jack. The first two ways may require help from the telephone company. You can change the wall outlets from one RJ14 jack to two RJ11 jacks. Or, you can have an RJ11 wall outlet installed and slave or jump one of the telephone numbers to it.

The third way is the easiest: Buy a triplex adapter. You can plug a triplex adapter into an RJ14 outlet. It separates the wires into two separate RJ11 jacks (Line 1, Line 2) and a third RJ14 jack (Lines 1 and 2). If your machine is on Line 1, plug the machine into L1 of the triplex adapter. If your machine is on Line 2, plug it into L2 of the triplex adapter.

Triplex Adapter

Installing machine, external two-line TAD and two-line telephone

When you are installing an external two-line telephone answering device (TAD) and a two-line telephone, your machine must be isolated on one line at both the wall jack and at the TAD. The most common connection is to put the machine on Line 2, which is explained in the following steps. The back of the two-line TAD must have two telephone jacks: one labeled L1 or L1/L2, and the other labeled L2. You will need at least three telephone line cords: the one that came with your machine and two for your external two-line TAD. You will need a fourth line cord if you add a two-line telephone.

- 1 Put the two-line TAD and the two-line telephone next to your machine.

- 2 Plug one end of the telephone line cord for your machine into the L2 jack of the triplex adapter. Plug the other end into the LINE jack on the back of the machine.
- 3 Plug one end of the first telephone line cord for your TAD into the L1 jack of the triplex adapter. Plug the other end into the L1 or L1/L2 jack of the two-line TAD.
- 4 Plug one end of the second telephone line cord for your TAD into the L2 jack of the two-line TAD. Plug the other end into the EXT. jack on the left side of the machine.

- 1 Triplex Adapter
- 2 Two Line Telephone
- 3 External Two Line TAD
- 4 Machine

Your additional two-line telephones on other wall outlets do not require adapters. There are two ways to add a two-line telephone to the machine's wall outlet. You can plug the telephone line cord from the two-line telephone into the L1+L2 jack of the triplex adapter. Or, you can plug the two-line telephone into the TEL jack of the two-line TAD.

Dialing access codes and credit card numbers

Sometimes, you may want to choose from several long distance carriers when you send a fax. Rates may vary depending on the time and destination. To take advantage of low rates, you can store the access codes of long-distance carriers and credit card numbers as Speed Dial numbers. You can store these long dialing sequences by dividing them and setting them up as separate Speed Dial numbers in any combination. You can even include manual dialing using the dial pad. (>>Basic User's Guide: *Storing Speed Dial numbers*)

For example, you might have stored "555" on Speed Dial: 03 and "7000" on Speed Dial: 02. You can use them both to dial "555-7000" if you press the following buttons on the Touchscreen:

press , press #03, press Send a fax and then press **7001** using the dial pad.

**Note**

PhotoCapture Center™: Printing photos from a memory card or USB Flash memory drive

PhotoCapture Center™ operations

Memory cards, USB Flash memory drive and folder structures

Your machine is designed to be compatible with modern digital camera image files, memory cards and USB Flash memory drives; however, please read the points below to avoid errors:

- The image file extension must be .JPG (other image file extensions like .JPEG, .TIF, .GIF and so on will not be recognized).
- Direct PhotoCapture Center™ printing must be performed separately from PhotoCapture Center™ operations using the PC. (Simultaneous operation is not available.)
- The machine can read up to 999 files ¹ on a memory card or USB Flash memory drive.

¹ The folder inside memory cards or USB Flash memory drive is also counted.
- The DPOF file on the memory cards must be in a valid DPOF format. (See *DPOF printing* >> page 50.)

Please be aware of the following:

- When printing an index or image, the PhotoCapture Center™ will print all valid images, even if one or more images have been corrupted. Corrupted images will not be printed.

- (memory card users)

Your machine is designed to read memory cards that have been formatted by a digital camera.

When a digital camera formats a memory card it creates a special folder into which it copies image data. If you need to modify the image data stored on a memory card with your PC, we recommend that you do not modify the folder structure created by the digital camera. When saving new or modified image files to the memory card, we also recommend you use the same folder your digital camera uses. If the data is not saved to the same folder, the machine may not be able to read the file or print the image.

- (USB Flash memory drive users)

This machine supports USB Flash memory drives that have been formatted by Windows®.

Movie printing

You can print images from movie files that are stored on a memory card or USB Flash memory drive.

A movie file is automatically divided into 9 parts by movie recording times and is placed in 3 lines, then you can see and print the scenes that have been automatically divided.

Note

- You cannot choose a particular movie scene.
- You can use AVI or MOV movie file formats (Motion JPEG only). However, if an AVI file size is 1 GB or more (the shooting time is about 30 minutes) or a MOV file size is 2 GB or more (the shooting time is about 60 minutes), these files cannot be printed.
