Hardware Installation

PS/2 Connector

1. Turn off all the power to your computer.
2. Remove the existing keyboard (if installed).
3. Plug the PS/2 connector into the keyboard port on the back of your CPU.
4. Turn on your computer.

USB Connector

1. Plug the USB connector into the keyboard port on the back of your CPU.
2. Follow the on-screen instructions to load the Microsoft® built-in HID (Human Interface Device) driver.

Software Installation

To take full advantage of all the features of your Multimedia Keyboard, you must uninstall any previous drivers before installing the software that comes with the keyboard.

Note: It is not necessary to install the Belkin software if your operating system is Windows Me or XP.

Insert the CD-ROM into the CD-ROM drive. A “welcome” dialog box will appear on screen. Click the picture of the keyboard to install multimedia driver.

Setup CD-ROM will automatically run the driver. If this is not the case, then run the setup.exe file manually. This file is located in the root directory of the setup CD.

InstallShield Wizard will appear on screen, click on “Next “. Follow the on-screen instructions.

Exclusive Function Supports

Hold the "Turbo" key and press F11 to lock your keyboard for security.

Hold the "Turbo" key and press F1 ~ F7 to adjust your cursor/input speed, from F1 being the slowest to F7 being the fastest.

Troubleshooting

Keyboard or multimedia hot keys do not work upon installation.

1. Make sure you have connected the cable correctly and firmly plugged it into PS/2.
2. Make sure the keyboard drivers have been properly installed in your system.
3. Please remove multimedia keyboard driver if your operating system is Windows Me or XP.

I am unable to put my computer in the suspend mode while pressing the "Sleep" hot key.

If you press the Sleep hot key into suspend or standby mode and nothing happens, the computer may not have power management functionality.

Make sure the power management settings for your operating system are correct or the motherboard and power supply are compatible. Please consult your motherboard manufacturer for directions on how to enable this in bios if your system supports it.

I am unable to wake my computer by pressing the "Wake up" hot key.

You may have encountered a problem with the power management functionality. Some systems will not wake up when they have been put in a suspend mode.

1. Refer to your computer hardware documentation regarding power management operation. Some computers may require you to press a button on the computer to wake it up.
2. Make sure the power management settings for your operating system are correct or the motherboard and power supply are ATX specification.

Uninstall Software

If it becomes necessary to remove the software and driver files of your Multimedia Keyboard, please follow these instructions.

1. Click "Start", "Settings", "Control Panel".
2. Double-click "Add/Remove Programs".
3. A dialog box appears asking you to confirm file deletion. Click "OK".
4. On the "Add/Remove Programs" Properties, choose "Multimedia Keyboard" and then click "Add/Remove".
5. A dialog box appears asking for your confirmation. Click "Yes" to continue.
6. Software and driver files of your Multimedia Keyboard will be removed automatically.
7. After completing uninstallation, click check box "Yes, I want to restart my computer now" and click "Finish" to restart your computer.
